dataSense

Always on, Always Learning.
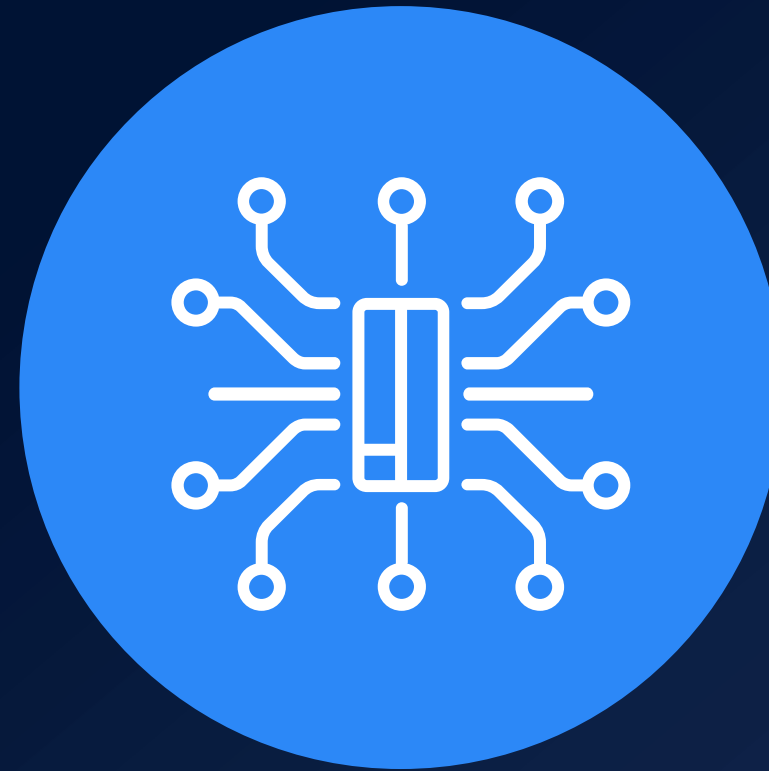

March   2023 v1.0

Problem

Extracting Value delivering more with less, using expensive resources to perform mundane manual activities, when the focus on value added activities should be priority

Market Drivers the pace of change, increasing compliance regulations, pressure on margins all driving organisation towards better use of data

Data Management every industry is facing exponential amounts of data, no limit in sight. Data is an asset that is under utilised and out of control leading to increased risk.

Answering these data questions: What, Where & Who

Our Solution

dataSense

An AI/ML data platform: manages & understands your data content , no human intervention

Single source of truth: Data facts, not opinions or interpretations builds trust & confidence

Observability Maturity: Exposing unanticipated & unknown issues in your key business processes
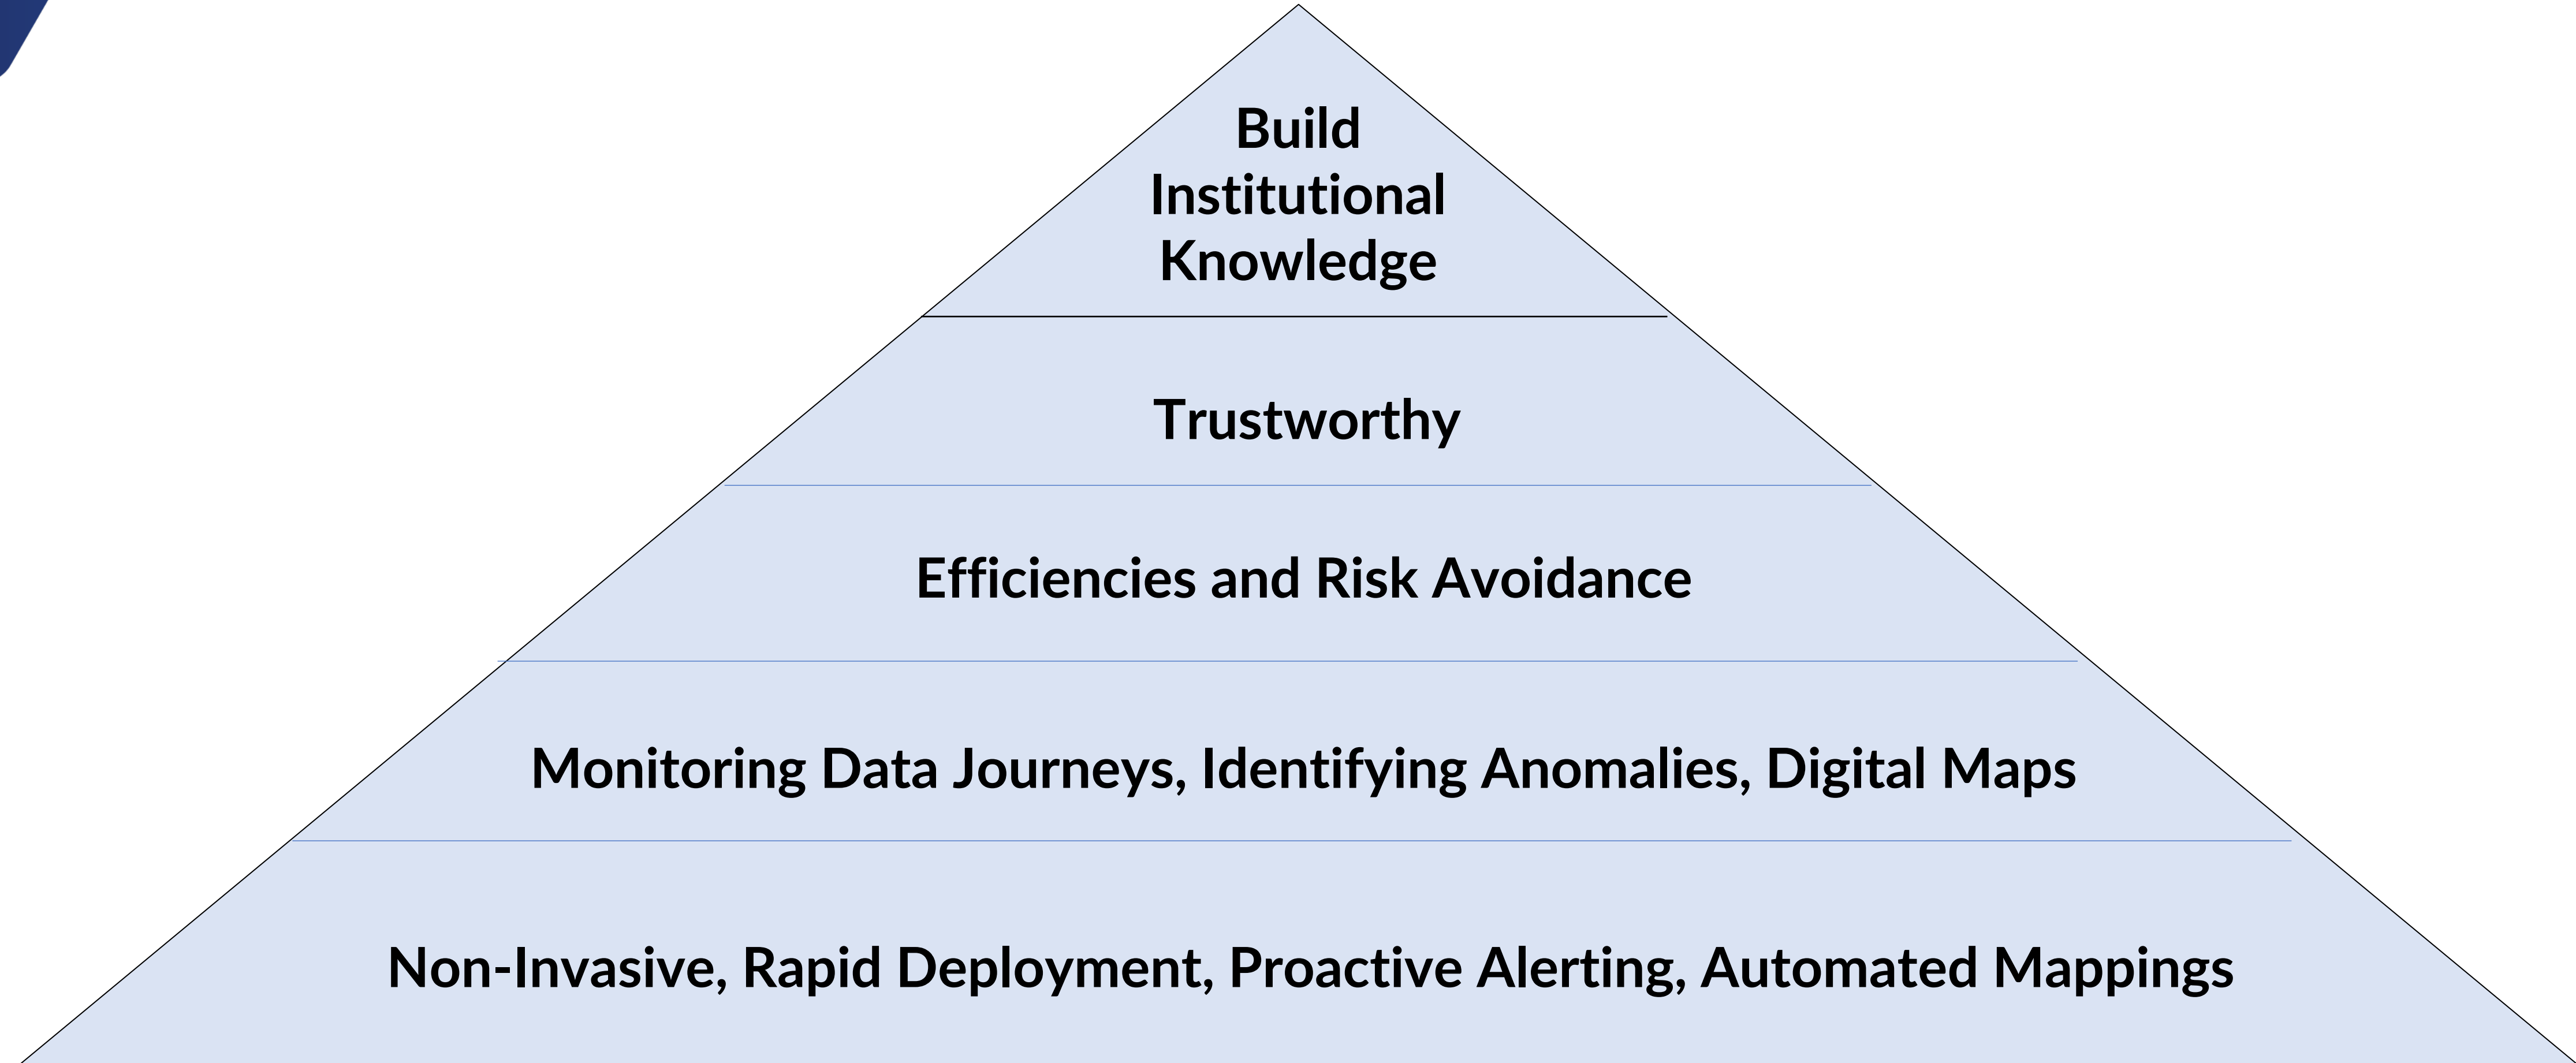

Leverage the technology to democratise the data

Our Platform

dataSense is defining the new paradigm for managing your data that drives your business

"We had a complex data problem to solve, and within an hour, we were able to setup a working proof-of-concept with the dataSense cloud data platform. This allows us to visualise the high value data assets moving around our data estate and build greater trust in our data capabilities."

Head of Digital, Tier 1 Bank
